But do not start here. Start with one good agent.

Minimal tech choices for a Python v0

If you want to build it yourself in Python, a clean v0 is:

- **FastAPI** for API layer
- **Pydantic** for schemas
- **httpx** for provider/tool calls
- **SQLite/Postgres** for run storage
- **Redis** optional for queues/cache
- plain Python classes for orchestration
- structured logging
- pytest for evals/tests

You do not need a heavy framework first.
